Invariant theory is a branch of abstract algebra dealing with actions of groups on algebraic varieties, such as vector spaces, from the point of view of their effect on functions. Classically, the theory dealt with the question of explicit description of polynomial functions that do not change, or are invariant, under the transformations from a given linear group.

In chemistry, Molecular orbital (MO) theory is a method for describing the electronic structure of molecules using quantum mechanics. Electrons are not assigned to individual bonds between atoms, but are treated as moving under the influence of the nuclei in the whole molecule. The spatial and energetic properties of electrons are described by quantum mechanics as molecular orbitals surround ...

I. Introduction. Starch is the major component of human diet and is also used for many food and nonfood/industrial applications (Gaillard, 1987, FAO, 2006a). A significant quantity of starch is further processed by subjecting it to various forms of chemical and physical modifications, resulting in starches with even greater functionality attributes (Zobel, 1992).

This work proposes a new meta-heuristic called Grey Wolf Optimizer (GWO) inspired by grey wolves (*Canis lupus*). The GWO algorithm mimics the leadership hierarchy and hunting mechanism of grey wolves in nature.
