Stiroh (2007) have shown that U.S. productivity growth has been concentrated in the service industries since 2000, especially those that make intensive use of information technology. NAICS also provides more detail on industries that produce information technology hardware, software, and services.

### **INFORMATION TECHNOLOGY AND U.S. PRODUCTIVITY GROWTH**

Productivity growth in the U.S. economy jumped during the second half of the 1990s, a resurgence that many analysts linked to information technology (IT). However, shortly after this consensus emerged, demand for IT products fell sharply, leading to a lively debate about the connection between IT and productivity and about the

### **Information Technology and Productivity: Where - The Fed**

Information technology " generally applied to describe the set of machines and telecommunication networks used to transfer and manipulate data " is widely used in business to increase productivity through process improvement, product innovation and new worker skills.
