

WAVELENGTHS AND INTENSITIES OF SPECTRAL LINES IN THE

The line emission intensity profiles for a total of eleven He I lines in the wavelength range 388.9–728.1 nm six singlet and five triplet lines given in Table I were also calculated. Figure 9 shows the emission intensities for a singlet line 667.8 nm He I and a triplet line 587.6 nm He I along the beam path.

Emission intensities and line ratios from a fast neutral

LINE INTENSITIES IN THE PHOTOSPHERE-CHROMOSPHERE TRANSITION REGION~ IV 23. before: the ill-distribution in the outer layers, derived from the relation between the two temperatures, can be left unchanged; flu then has to be somewhere between the ill-value and I (depending on the choice of $g_f A$).
