the genus lentinus a pdf

Neolentinus is a genus of wood-decaying agarics with tough (leathery to woody) fruit bodies composed of dimitic tissue, serrated lamella edges, and nonamyloid white binucleate basidiospores among other features. It was segregated from Lentinus in the broad taxonomic sense, hence the derivation of the name.

Genus Lentinus - definition of genus Lentinus by The Free

Abstract. There have been few studies on the taxonomy and biodiversity of the genus Lentinus in Thailand, which is a genus of edible mushrooms. Recently, collections from 17 sites in northern Thailand yielded 47 specimens of Lentinus sensu lato. Three were shown to be new species of Lentinus sensu stricto and Lentinus roseus, L. concentricus and L. megacystidiatus are introduced in this paper.

Lentinus caespiticola is unique among species of *Lentinus* in that it is gramminicolous. Manimohan & Leelavathy (1995) observed that the collections made from Kerala State never showed the caespitose habit, one of the characteristic features of this species, and hence they erected a new variety, *L. caespiticola* var. *asiaticus* Manim.
